- 1 Success in export Market
- 2 PU Lining on Aluminium Pump Parts
- 3 Did you know?

Success in Export Market...

As you know, since last 20+ years, we have catered various types of demanding applications using our PU knowledge base. We can formulate the polyurethane properties as per application demand. Indeed, this is our core strength. We have more than 1000 satisfied customers in India and across the globe...

In this edition, we are sharing our remarkable success in export Market, specifically in the field of mining pump manufacturing and servicing area, where we have provided most appropriate solution i.e. polyurethane lining on various Aluminium pump parts....

*"We are small
 enough to be flexible
 and competent
 enough to solve your
 problem."*

Cast Polyurethane lining on Aluminium Metal Parts of Pumps -

A well-known Far East company engaged in manufacturing of pumps for mining applications was in search of quality suppliers for PU lining on their aluminium pump parts to take care of the nasty working environment, wear & tear etc...

Fortunately, they approached us with product drawings and their expectations from PU lining. Considering application, team Speciality selected the most appropriate PU grade and designed the suitable molds to get exact dimensions without much machining.

PU is one of the best options for this type of application on following points

1. Excellent Bonding with metal.
2. Oil, Solvent, Water, Chemical and Ozone Resistance
3. Better wear and corrosion with abrasion resistance etc.
4. Working Temperature Range from – 40° C to 80°C

We have developed 3 different pump parts and can proudly say that “ALL is OKAY” in 1st trial itself. Customer appreciated the products very much and informed us that they are much superior to their earlier supplies and are at par with global standards.

Needless to say, we started getting regular orders from customer ...

Did you know?

Polyurethane is the best option where plastic and rubber fail to perform...
